

# RAD-CONTROL IRRADIATION TAGS

## HOW TO GET STARTED

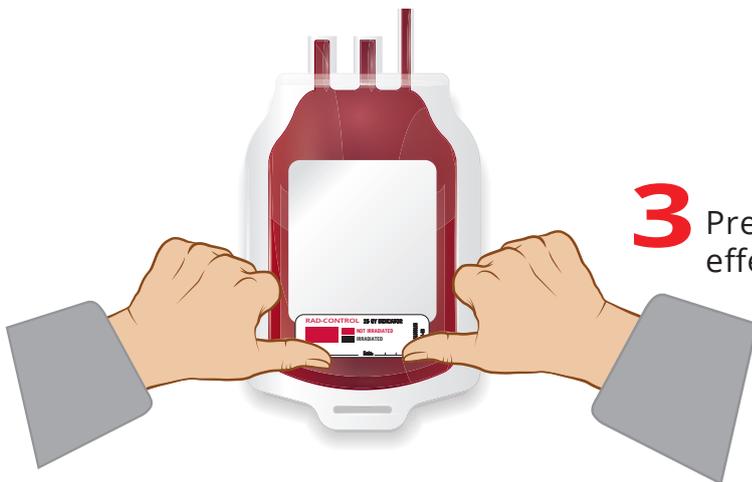

**1** Wipe off any condensation from the surface of the blood bag

**2** Apply the tag to a clean, dry area

**Tip:** Keep part of the tag on the blood bag label for best possible adhesion

**3** Press down firmly to effectively adhere the tag

**Please note:** Once adhered the label takes a few minutes time to fully develop its adhesive strength

### HELPFUL TIPS

- Refrain from bending the tag, particularly around the indicator window
- Avoid exposure to direct sunlight and UV sunlight
- Store away from sources of radiation

Rad-Control irradiation tags serve to verify whether irradiation has occurred and should not be considered as irradiation dosimeters.
